

ANALEMMA
THE ARCHITECT OF LIFE

English version

Cleaning & Inspecting your Water Bottle.

Follow the **5 steps** below
to detach and attach the mesh tube in your Water Bottle

Step 1

Place a towel in a spot where the Water Bottle can't easily roll away or fall.

Step 2

- First, empty all the water from the water bottle, and then remove the inner part from the bottle by pulling it out in a straight motion by the button.
- Place the interior on the towel.

Image A shows how the interior part is constructed.

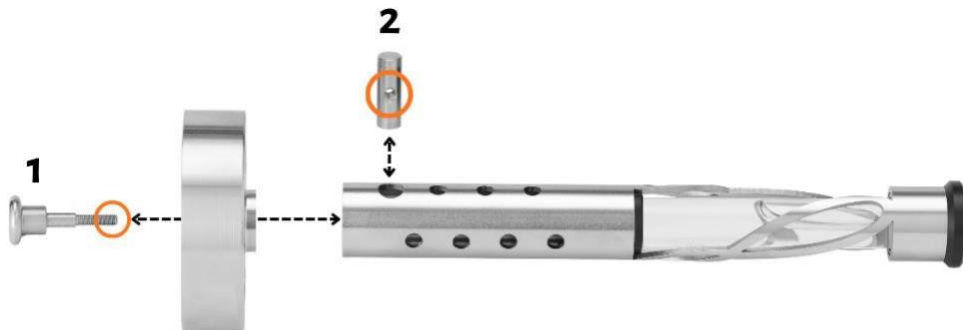

Image A

Step 3

Turn the knob (see image A – no. 1) counterclockwise until it comes loose and can be removed. You can now detach the upper part so that the mesh tube can be slid over the long section of the interior. Place the small white ring beyond the threads of the knob.

In Figure 3 on the next page, you can see how the mesh tube is placed.

ANALEMMA

THE ARCHITECT OF LIFE

1

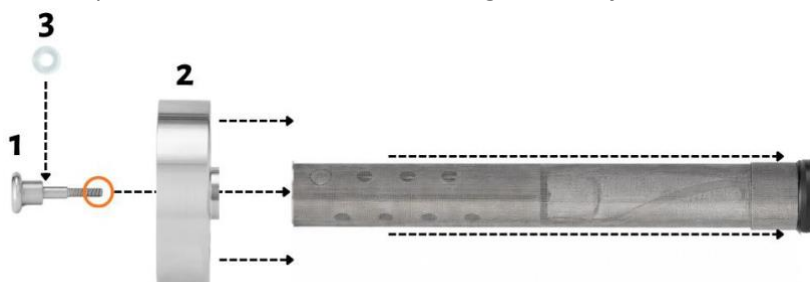

2

Unscrew the knob (1) and remove the round top (2)

3

Place the white ring (3) beyond the screw thread on the rotary knob (1) and place the mesh tube over the long section of the interior

4

Re-attach the top part and tighten the knob again, in the reverse order of the removal process.

Step 4

Turn the small screw knob clockwise back into the Analemma holder. If necessary, use pliers and place a (hand) towel over the knob to protect it from scratches.

Step 5

Put the inner part back into the water bottle, and you're all set.

Please do NOT add Salt or Minerals directly into your bottle as this
may cause a reaction with the stainless steel components.

Therefore, your Analemma Bottle should be used exclusively with
Water.

Refill the bottle with water and enjoy your coherent water!

Warm regards,

Team Analemma
