The Benefits of Garden Analemma:

The first few years of our research were dedicated to testing the effects of Analemma water on plants. We found increased diversity of soil bacteria, improved mineralization, more biophoton emission and long-term effects such as higher resistance to pests.

Our latest study showed that only two weeks of watering basil plants with Analemma water caused significant improvements in multiple aspects of plant physiology which indicated improved resistance to drought.

GARDEN ANALEMMA
INSTALLATION
INSTRUCTIONS

Parts of the unit

The Garden Añalemma unit contains a central brass unit, a male brass connector on one end, and a female brass connector on the opposite end. The Añalemma connectors are fully compatible with various connectors available in home improvement stores.

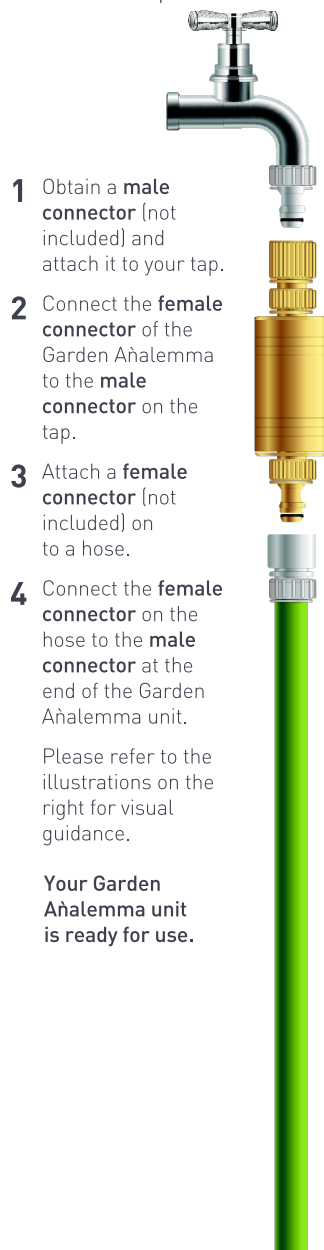

Note: The Garden Añalemma is made of brass, which is susceptible to discoloration. This does not affect the function of the unit. If you notice discoloration on your Garden Añalemma, we recommend polishing the unit with brass polish to remove the tarnish and help maintain its natural color.

Añalemma Water is not responsible for any damage caused by mishandling or dropping the unit.

Attaching the unit (1)

To attach your Garden Añalemma unit directly to a tap, follow these steps:

- 1 Obtain a **male connector** (not included) and attach it to your tap.
- 2 Connect the **female connector** of the Garden Añalemma to the **male connector** on the tap.
- 3 Attach a **female connector** (not included) on to a hose.
- 4 Connect the **female connector** on the hose to the **male connector** at the end of the Garden Añalemma unit.

Please refer to the illustrations on the right for visual guidance.

Your Garden Añalemma unit is ready for use.

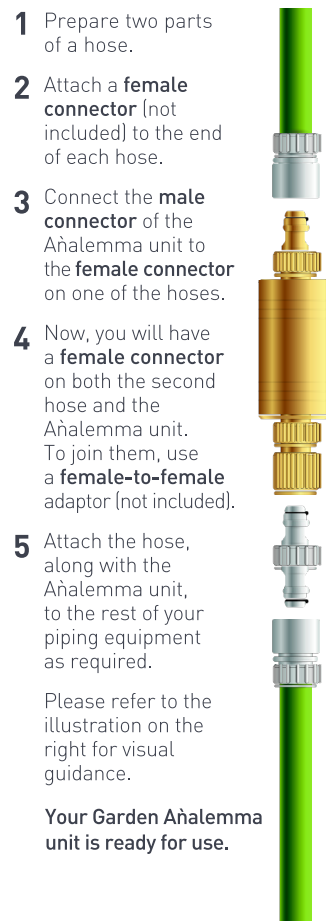

Attaching the unit (2)

If your tap is not strong enough to hold the weight of the Garden Añalemma unit, you can install it in the middle of a garden hose (as illustrated below) and place it on the ground.

Note: Make sure to place your Garden Añalemma horizontally on a soft surface, such as grass or rubber, to prevent it from scratching or damaging.

To attach your Garden Añalemma unit mid-hose, follow these steps:

- 1 Prepare two parts of a hose.
- 2 Attach a **female connector** (not included) to the end of each hose.
- 3 Connect the **male connector** of the Añalemma unit to the **female connector** on one of the hoses.
- 4 Now, you will have a **female connector** on both the second hose and the Añalemma unit. To join them, use a **female-to-female adaptor** (not included).
- 5 Attach the hose, along with the Añalemma unit, to the rest of your piping equipment as required.

Please refer to the illustration on the right for visual guidance.

Your Garden Añalemma unit is ready for use.
