ANALEMMA

THE ARCHITECT OF LIFE

POINT OF USE

Point of use

PRODUCT INFORMATION

Dimensions package: 227 × 85 × 60 mm

Weight including packaging: 960 gram

EU version: outer 1/2" BSP thread standard

US version: outer 1/2" NPT thread standard

Materials used:

- Brass housing of unit
- Stainless steel bracket
- POM plastic bracket holders
- Structured water (coherent water)

NOTE:

The Analemma Point of Use unit is made of brass, which is susceptible to discoloration. This does not affect the operation of the unit. If you notice that your unit is discolored and you don't like the discoloration aesthetically, we recommend polishing the unit with brass polish to remove the tarnish and maintain its natural color.

INTRODUCTION

The Point Of Use unit will provide you with stable coherent water at one specific waterpoint.

APPLICATION

The desired screw-on fitting can be connected via the external threads on this unit. Connectors with 1/2" fittings can be attached to these ends.

This allows for greater versatility in connecting to your waterpoint.

It makes the Point of Use unit easy to connect and disconnect again if necessary.

TECHNICAL INFORMATION

The Point Of Use unit has external threads on both sides. The correct fittings have a size of 1/2" diameter.

At a hardware store or specialty store, several types of fittings are available to connect the unit to your chosen water point of use. Fittings or connecting parts are not included with the purchase of this unit.

The unit does not have to be level or upright to do its job. It can be used in any position you choose. Both ends can be interchangeably used when connecting.

The mounting bracket is optional for you to use. The unit is easily detachable from the bracket should you choose not to.

SAFETY & USAGE ADVICE

Installation of the Point of Use unit does not require a licensed plumber.

With the correct fittings to connect the unit at one water point, simply screw the fittings together to make the connections.

If it is necessary to shut off the water pressure, for example when installing at the inlet to a water faucet in the kitchen, first shut off the water supply, main valve or the water inlet to the water point to which you want to connect the unit.

- Connect the Analemma device to the appropriate water supply system. Use two Bahco wrenches, one to hold the end of the unit pipe and the other to tighten the coupling securely.
- For a good, watertight seal when screwing in the connectors, use a thread sealant such as water sealing tape, Teflon tape, or hemp cord.
- Then turn on the water pressure and/or check that there are no leaks at the connections.
