ANALEMMA

THE ARCHITECT OF LIFE

WATER INLAY

WATER INLAY

PRODUCT INFORMATION

Dimensions package: 130 × 62 × 27 mm
Weight including packaging: 100 gram

Materials used:

- Stainless steel housing
- Crystal glass tube with foodgrade silicone closing cap
- Food-grade hard POM-C housing caps
- Structured water (coherent water)

Optional:

- 2 Food-grade soft silicone covers for the unit housing caps

INTRODUCTION

The Analemma Water Inlay is compact and durable. It's especially designed to remain submerged and in direct contact with water for long periods of time.

Thanks to the use of high-quality, food-grade safe materials nothing will dissolve or detach so the Water Inlay can remain safely submerged in water without having to be removed each time.

APPLICATION

Simply place the Water Inlay in the intended body of water. The structured 'mother water' in the core naturally brings the surrounding water into a coherent state. The Water Inlay is suitable to stay submerged for prolonged periods of time.

FIRST USE

Rinse the Water Inlay briefly with cold or lukewarm water before first use. Place the Water Inlay gently and completely under water at the bottom of the desired water container.

Make sure that the Water Inlay is free of obstructions, is not stuck to anything or will possibly block or obstruct something. If necessary, use the soft silicone cap covers to protect fragile water containers.

MAINTENANCE

Over time, limescale or other deposits may form on the Water Inlay due to prolonged exposure to water. If it needs cleaning use a soft brush. Do not use hot or boiling water to clean this product as it might lead to damage to the crystal glass tube. Keep the POM-C housing caps in place to protect the crystal glass core. Store the product in a safe place when not in use.

Removing limescale:

- 1) Mix equal parts water and vinegar and spray this onto the Water Inlay. Leave it to work for 5 minutes and then brush it clean with a soft brush.
- 2) Or place the Inlay in the solution (water with vinegar) for 5 minutes and brush the Inlay clean with a soft brush.

NOTE: Vinegar can be used to clean stainless steel, but with some caution. Vinegar effectively removes limescale and restores the shine of stainless steel. However, prolonged exposure to vinegar can damage stainless steel, so it is important not to use it too often or for too long.

In all cases after cleaning the product, rinse thoroughly with clean water and dry the surface with a soft cloth to prevent new deposits.

SAFETY & USAGE ADVICE

The Water Inlay is intended for use in drinkable or other water and can safely remain in permanent contact with water.

Do not use the product in combination with substances or liquids that may damage any of the materials.

Avoid extreme temperature changes, such as freezing or exposure to boiling water, to prevent damage to or even possible chattering of the crystal glass core.

Do not use aggressive or chemical cleaning agents to clean this product.

This product is not dishwasher safe.

Keep the Water Inlay out of reach of children, as the crystal glass core is fragile and may cause injury and/or breakage if dropped or used incorrectly.
